Part 1 – Project and Sponsor Information				
Name of Action or Project: Geothermal open well system installation at Springville Center for the Arts				
Project Location (describe, and attach a location map): 37 N Buffalo St, Springville, NY 14141				
Brief Description of Proposed Action: Installation of a geothermal open well system consisting of two (2) approximately 100ft deep, 6" in diameter Water Wells. One of those Wells will serve as a supply Well and the other as a discharge Well. The proposed peak flow rate will not exceed 35GPM for short periods of time. A typical flowrate during runtime of the system is 15-20GPM, however since the water will be discharged back into the ground there will be no effect on the water level in any aquifer. For the interior piping we propose to use HDPE, brass fittings and Geothermal Heatpumps with Cupro-Nickel Coils. This will avoid the necessity of a prior treatment of the Well Water and all materials are safe to use with domestic water, thus not altering or polluting any of the water that will be discharged. To prevent contamination by water entering from above, both wells will be fitted with water tight well heads and all piping and electrical lines will be sealed.

Part 3 should also explain how the lead agency determined that the impact may or will not be significant. Each potential impact should be assessed considering its setting, probability of occurring, duration, irreversibility, geographic scope and magnitude. Also consider the potential for short-term, long-term and cumulative impacts.

This Local Law is a modification to the existing parking statue that will allow 6 spots (3 on each side of Mechanic) from E.
